

R V Chandan

Software Engineer — Backend (Java, Spring Boot) & Applied AI

chandanrv97@gmail.com | +91-9916098547 | Bengaluru, India | LinkedIn | GitHub

Summary

Backend Engineer with 3 years of experience designing and scaling large-scale Java/Groovy and Spring/Grails systems serving 5.5M+ students and 750K+ tutors. Promoted twice and trusted to own critical systems across payments, settlement, identity, access, and LLM-powered services.

Experience

UrbanPro.com — Bengaluru, India

Sep 2023 – Present

AI Engineer (On-site)

Aug 2026 – Present

- Built an autonomous **ticket-to-pull-request agent**: reads a Jira issue, retrieves the affected code across a **1.03M-LOC, 601-model codebase**, edits it in an isolated git worktree, generates tests, verifies its own diff and opens a review-ready PR — multi-step tool use with self-verification in the loop.
- Designed a **production incident auto-triage pipeline**: ingests Logz.io error streams, correlates each alert to the responsible source path, posts a root-cause summary to the linked Jira issue and raises a tested fix PR, collapsing the manual log-to-diagnosis step for recurring faults.

Software Engineer (Hybrid)

May 2025 – Present

- Re-architected platform identity into a **dual-profile model** (one credential, independent Tutor and Student profiles), migrating the shared auth schema across a live **15M-row** member table and rewiring **Spring Security** onto it with no downtime or forced re-login.
- Raised code quality org-wide with a **test-generation framework** adopted as the coverage standard across **170 backend services**, and **six static review detectors** (unindexed queries, N+1 access, PII in logs, OWASP, undocumented endpoints, untested branches) catching defect classes pre-merge.
- Opened **US and UAE** revenue channels with an end-to-end **Stripe** integration: multi-currency checkout, SCA/3-D Secure, idempotent webhook reconciliation, and retry and failure handling.
- Built the **trust-and-safety moderation pipeline** for chat, voice and class recordings (media → transcript → verdict on **Google Vertex AI**) behind a labelled evaluation corpus and an accuracy harness blocking prompt changes that breach **10% false-positive/negative**.
- Automated **four human content-approval queues** behind a staged **50% traffic rollout** with per-queue kill switches and a defer-to-human path, diagnosing and recalibrating an over-rejecting first release against a labelled production sample.
- Launched **UrbanPro Unlimited** (backend service, entitlement model, checkout) and rebuilt live-class scheduling and join across the web app and the mobile **REST API**.

Associate Software Engineer (on-site)

Sep 2023 – Apr 2025

- Owned the **Razorpay** integration and the **fee and settlement engine** — instalments, percentage versus flat fees, refunds and reversals — and fixed mis-charge defects that were double-counting already-settled amounts, recovering incorrectly billed revenue for affected users.
- Cut p95 latency and peak database CPU on the highest-traffic endpoints with **Redis** caching of hot read paths, batched rewrites of N+1 ORM access and covering indexes; shipped subscription lifecycle and recording-retention flows hardened through on-call triage.

Technical Mentor, FACE Prep (on-site) — Coimbatore, India

Jul 2023 – Aug 2023

Mentored engineering students in **Core Java** and **DSA** through structured problem-solving and mock interviews.

Technical Skills

Languages & Frameworks: Java, SQL, JavaScript, Groovy | Spring Boot, Spring Security, Hibernate/JPA, REST, Grails

Data & Infrastructure: MySQL, PostgreSQL, Redis, Apache Solr, Liquibase, Quartz scheduling, Docker, Jenkins, Git

Cloud & AI: GCP (Vertex AI, Cloud Storage, Secret Manager), Azure | LLM agents, tool use, Gemini, RAG, MCP, evals

Payments: Stripe, Razorpay, multi-currency settlement, reconciliation, webhook idempotency

Practices: System design, schema migration, Spock/JUnit testing, code review, observability, on-call triage

Projects

- Yodhha NotesAI** — AI exam-prep platform (*Spring Boot, PostgreSQL, Gemini, Docker*): **Gemini 2.5 Flash** generates MCQs, explanations and study plans for UPSC/NEET/JEE/GATE aspirants behind a response cache that cuts per-user model cost; JWT, BCrypt, OTP and role-based access control over a normalised JPA schema, with real-time mock tests and Dockerised deployment.

Education

B.E. Electronics & Communication — ATME College of Engineering, Mysuru

2019 – 2023 | CGPA 8.3/10
